Geospatial challenges and opportunities

Business

GIS helps retailers, real estate professionals, insurers, and others to visualize, manage, and analyze any business asset.

Defense & Intelligence

GIS plays an important role in assessing terrorist targets, battlefield planning, and military facilities management.

Education

GIS provides educators with tools to help students develop a greater understanding of our world.

Government

GIS helps governments increase efficiency, reduce costs, improve coordination, and deliver transparency and accountability.

Health & Human Services

GIS helps health organizations leverage limited resources and positively impact individuals, families, and society.

Mapping & Charting

GIS allows aeronautical, cartographic, and nautical organizations to implement an effective and efficient workflow.

Natural Resources

Natural resource professionals rely on GIS to help make critical decisions as they manage the earth's resources.

Public Safety

GIS gives public safety personnel the ability to visualize relationships and reveal trends critical to response and planning.

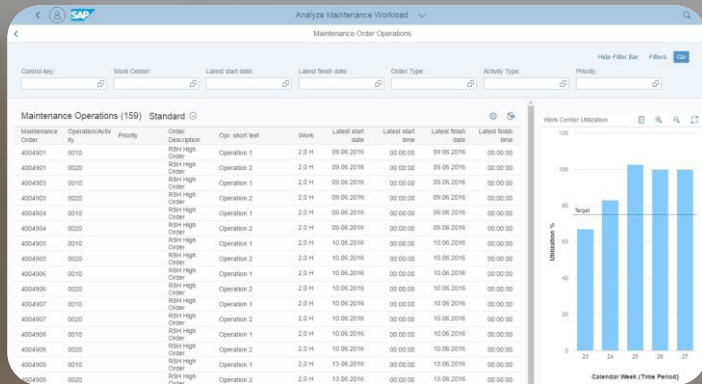

Transportation

Transportation professionals use GIS to help in managing, planning, evaluating, and maintaining transportation systems.

How companies are looking to improve their operations information

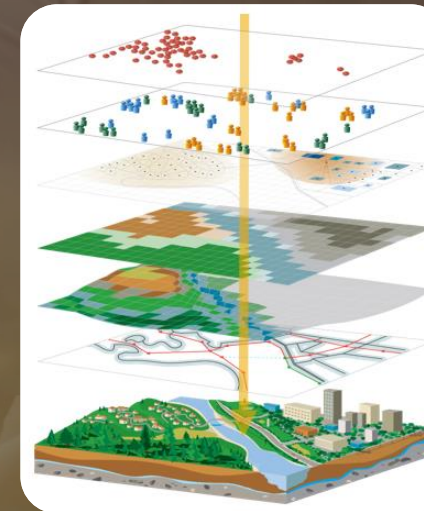

Currently companies balance among silos

Transaction based Operational data

- Business process modelling
- Domains: logistics, finance, commercial, assets
- History / log
- Consolidated datamodel

Spatial based Operational data

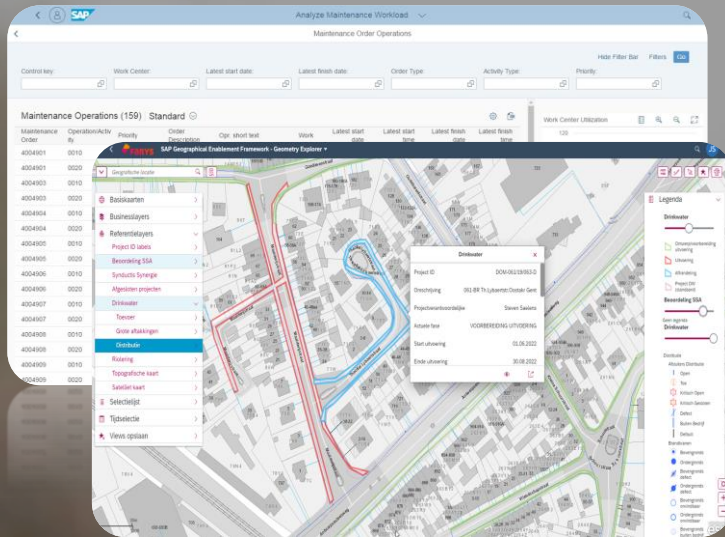

- Events
- Field crew, customers
- Assets, Facilities
- Analysis: Territories, Predictive Incidents, etc.
- Elevation, Demographics, Aerial and Drone Umagery
- Utility Network, Rivers
- Holistic View

Graph

**Shifting the Spatial Analytics
capabilities**

77 %

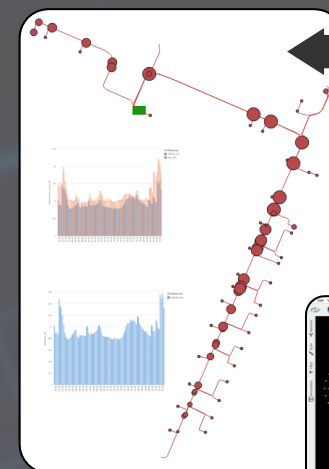

- ✓ Provides the ability to find hidden answers to an entirely new set of business questions which otherwise was not possible before
- ✓ Goes beyond traditional entities and builds relationships into existing data on the fly
- ✓ Finds interconnected data much faster using scalable traversal method without requiring huge table joins in relational database systems
- ✓ With ever growing massively connected data businesses requires easy way to find relationships for building next level business operations

THE BEST RUN **SAP**

THE BEST RUN **SAP**

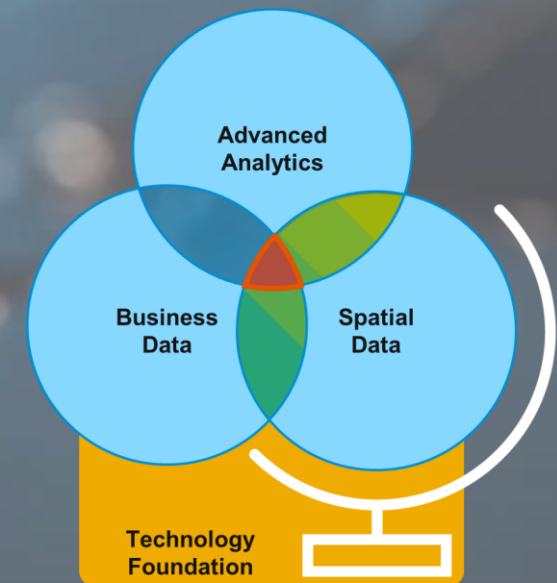

**Metaverse
experience**

A woman with short blonde hair, wearing a dark blue dress, is standing and interacting with a large, tilted digital display. She is holding a small device in her right hand and touching the screen with her left hand. The background shows a modern office interior with large windows and structural elements.

FACILITATING A GEO-SPATIALLY ENABLEMENT OF OPERATIONAL AND DATA DRIVEN PRACTICES ENABLES:

- ✓ Overcome the long-standing silos between GIS and ERP software to **improve your business**
- ✓ Unleash the **power of geospatial intelligence** within your enterprise through the seamless integration into a platform
- ✓ Realize **better decision making, new insights, enhanced workflows, greater productivity and lower TCO**

**Power your operations by
combining Spatial with
Business data while using
a solid Technology
Foundation.**
